EDUCATION

University of Washington, Seattle

Sep.2024 - Jun.2026(Expected)

Master of Science in Information Management.

GPA: 4.0/4.0

China Pharmaceutical University, Nanjing

Sep.2020 - Jun.2024

Bachelor of Management in Information Management and Information Systems

GPA: 3.7/4.0

SKILLS

Programming Languages: Java, Python, JavaScript, SQL, HTML/CSS, C++

Frameworks & Tools: Spring Boot, React, Vue, Hadoop, Apache Spark, TensorFlow, PyTorch, Git

Databases & Caching: MySQL, SQL Server, Redis

Cloud & DevOps: AWS, Docker, CI/CD, Linux, Azure, Nginx

Concepts: RESTful APIs, Microservices, System Design, SDLC, Encryption, Authentication & Authorization

WORK EXPERIENCE

IpserLab – Full Stack Intern

Jun.2025 - Present

- Engineered modular backend services using **Java, JavaScript, and MySQL**, with a custom ORM layer for persistence and implemented **RESTful APIs** to enable reliable JSON-based data exchange.
- Built responsive user/admin interfaces with **React.js** and **TailwindCSS**, including dynamic multi-step forms and state management, and integrated **Chart.js** for interactive data visualization.
- Implemented **secure authentication system** with email validation, server-side login, token-based session management, and 2FA support.
- Designed and launched a 6-step dynamic application workflow supporting applicant details, project data, **multi-file uploads** (PDF, PNG, JPG, DOC), and **multi-currency payment integration** (USD & Zimbabwean Dollar).
- Delivered usability features including **draft-saving & progress tracking**, and integrated **Email/SMS notifications** for automated status updates.

Nanjing Legend Pharmaceutical & Chemical Co., Ltd - IT Department – SDE Intern

Feb.2023 - Apr.2023

- Developed a cross-platform mobile attendance check-in application using **Java** and **React**, improving employee tracking efficiency.
- Contributed to a tumor treatment tracking system using **Spring Boot** for managing patient data, treatment schedules, and progress tracking, and collaborating on frontend development using **HTML5, CSS3, and JavaScript**.

PROGRAM EXPERIENCE

Virtual Character Letter Platform

Nov.2024 - Present

- Developed a hybrid backend using **Spring Boot** for user management and role creation, leveraging **RESTful APIs** for front-end and back-end communication and integrating **LangChain** for LLM model support.
- Utilized **Redis** for caching to reduce latency and designed a multi-database architecture, using **MongoDB** for storing unstructured letter content and **MySQL** for managing structured user and role data.
- Implemented **RabbitMQ** to handle asynchronous messaging between Java and Python services, ensuring efficient communication across the system.
- Deployed the application to an **Amazon EC2 instance**, using **Docker** for containerization and **Nginx** for reverse proxy management. Configured **AWS CloudWatch** for monitoring and logging to ensure system stability.

Online Food Order System

Sep.2024 - Nov.2024

- Built core modules (user, menu, order management) with **Spring Boot**, using **Spring State Machine** to manage complex order state transitions.
- Implemented authentication and authorization with **Spring Security + JWT**, adopting **RBAC** (Role-Based Access Control) for fine-grained permission management.
- Integrated **Redis** to cache frequently accessed data, reducing database load and enhancing system performance.
- Automated order status updates with **Spring Task** to improve operational efficiency and enabled real-time notifications using **WebSocket** for better user experience.
